Worked Answer Key

Page 1: 1. 6,042,019. 2. 805,007,300.

Page 2: 1. 4,000,000 + 300,000 + 5,000 + 70. 2. 90,000,000 + 8,000 + 600 + 4.

Page 3: 1. 8 is in the hundred-thousands place: 800,000. 2. 7 is in the billions place: 7,000,000,000.

Page 4: 1. 6 is in the ten-thousands place. 2. 0 is in the hundred-thousands place.

Page 5: 1. 6,030,802. 2. One possible answer is 900,004,070. The unspecified places are zero in this example; other whole numbers with the three required digits in their stated places are also correct.

Page 6: Each zero shows that its place has no units and keeps the other digits in their correct places. 1. 4,006,030: zeros hold the hundred-thousands, ten-thousands, hundreds, and ones places; read "four million, six thousand, thirty." 2. 70,000,508: zeros hold the millions, hundred-thousands, ten-thousands, thousands, and tens places; read "seventy million, five hundred eight."

Page 7: 1. 7,405,018 $<$ 7,450,018. 2. 83,000,900 $>$ 83,000,090.

Page 8: 1. 304,005; 304,050; 304,500; 340,050. 2. 8,000,100; 8,001,000; 8,010,000; 8,100,000.

Page 9: 1. 5,687,901; 5,678,901; 5,678,091; 5,608,971. 2. 92,010,040; 92,001,400; 92,000,140; 91,999,999.

Page 10: 1. 41,290,876; they differ first in the ten-thousands place (9 $>$ 0). 2. 600,070,004; they differ first in the ten-thousands place (7 $>$ 0).

Page 11: 1. 4,638,000 (291 rounds down). 2. 72,500,000 (the ten-thousands digit is 5, so round up).

Page 12: 1. 900,000,000 (501,200 rounds up). 2. 35,050,000 (the thousands digit is 9, so round up).

Page 13: 1. 6,270,000; the thousands digit is 4, so round down. 2. 100,000,000; the ten-millions digit is 9, so round up.

Page 14: 1. 249,000 + 391,000 = about 640,000. 2. 704,000 + 166,000 = about 870,000.

Page 15: 1. 25,000, because it is 5,000 from each endpoint. 2. 4,700,000, because it is 100,000 from each endpoint.

Page 16: 1. 53,204 × 1,000 = 53,204,000. 2. 8,700,000 ÷ 100 = 87,000.

Page 17: 1. 24,981,903. 2. 507,238,016.

Page 18: 1. 68,450,012 is greater; compare the ten-thousands place after the equal first digits. 2. $246,000,000; the hundred-thousands digit is 6, so round up.

Page 19: 1. "Three hundred five million, forty thousand, seven"; 300,000,000 + 5,000,000 + 40,000 + 7. 2. 9,009,009; 9,009,090; 9,090,009; 9,900,009.

Page 20: 1. 43,499,999; numbers from 42,500,000 through 43,499,999 round to 43,000,000, so this is the greatest. 2. 70,200,090; to the nearest million, 70,000,000 (the hundred-thousands digit is 2, so round down).
